XpertIntern Platform

System Requirement Document (SRD)

Part 1 – Public Website Requirements

---

1. Introduction

This document describes the requirements for the **XpertIntern web platform**.

XpertIntern is an online platform that provides **training programs for students** and allows **certificate verification** through a digital system.

The platform will help students:

- Explore training programs
- Enroll in courses
- Access training materials
- Verify certificates online

The system will consist of **three main sections**:

1. Public Website
2. Student Dashboard
3. Admin Dashboard

This document explains the **Public Website requirements**.

---

2. Public Website Overview

The public website is the **main landing area** of the platform.

Anyone can visit this website without logging in.

The purpose of the public website is to:

- Introduce XpertIntern
- Show available training programs
- Allow certificate verification
- Allow students to register or login

The public website will mainly include **three sections**:

1. Header Section
2. Hero / Main Content Section
3. Footer Section

---

3. Header Section

The header will appear at the **top of every page** of the website.

It should remain visible while scrolling (sticky header).

Header Menu Items

The following items will appear in the header:

- Logo
- Home

- About Us
- Contact Us
- Training
- Internship
- Certificate Verification
- Login / Signup

3.1 Logo

The logo represents **XpertIntern**.

When users click on the logo, they should be redirected to the **homepage**.

3.2 Home

The Home button will redirect users to the **main landing page** where they can see the overview of the platform.

3.3 About Us

The About Us page will describe:

- What XpertIntern is
- The services provided by the platform
- The goal and mission of the platform
- How students benefit from the platform

3.4 Contact Us

The Contact Us page will contain the following information:

- Company address
- Contact email
- Phone number

There will also be a **contact form** where users can send queries.

Contact Form Fields

- Name
- Email
- Phone Number
- Message

When the form is submitted:

- The data should be stored in the system
- Admin should be able to view this data in the admin panel

---

4. Training Section

The Training section will display **all available training courses** uploaded by the admin.

Students should be able to:

- Search for training programs

- Apply filters
- View course details
- Enroll in courses

4.1 Training Page Layout

The training page should contain:

- Search bar
- Filter options
- Training course list

4.2 Search Feature

Students should be able to search training programs using keywords such as:

- Course name
- Technology name
- Skill name

Example:

- Web Development
- Python Programming
- Data Science

4.3 Filter Options

Students should be able to filter courses based on:

- Course category
- Duration
- Mode (if applicable)

4.4 Course Card Display

Each course card should show:

- Course title
- Course image / thumbnail
- Short description
- Duration
- Enroll button
- View details button

When students click **View Details**, they should see:

- Full course description
- Course modules
- Course materials
- Enrollment option

---

5. Internship Section (Phase 2 Feature)

The Internship feature will **not be available in the first phase of development**.

However, the Internship option will still appear in the **header menu**.

Internship Menu Behavior

When a user clicks on the **Internship** menu:

- The user will be redirected to a separate page.
- This page will display a **“Coming Soon” message**.

Coming Soon Page Content

The page should contain:

Title:
Internship Opportunities – Coming Soon

Message:
This feature will be available in the next phase of the XpertIntern platform.

Optional elements:

- Illustration or image
- Button linking back to training programs

---

6. Certificate Verification System

The platform will provide a **certificate verification feature**.

Users can verify certificates using a **certificate number**.

Certificate Verification Page

The page will contain:

- Input field for certificate number
- Verify button

Verification Process

When a user enters a certificate number and clicks verify:

The system should display the following details:

- Student name
- Course name
- Certificate number
- Date of issue
- Certificate image

The certificate data will be uploaded by the **admin panel**.

---

7. Login / Signup

Students should be able to create an account or log in.

Signup Form Fields

- Name
- Email
- Mobile number
- Password

After signup or login, students will be redirected to the **Student Dashboard**.

---

8. Hero Section (Main Page Content)

The hero section is the **main information section** of the homepage.

It should explain what **XpertIntern offers**.

This section should include:

- Introduction to XpertIntern
- Information about training programs
- Benefits of joining the platform
- Call-to-action buttons

Example buttons:

- Explore Trainings
- Join Now

---

9. Footer Section

The footer will appear at the **bottom of the website**.

It should contain:

Quick Links

- Home
- Trainings
- Certificate Verification

Company Information

- About Us
- Contact Details
- Address

Social Media Links

- LinkedIn
- Instagram
- Facebook
- YouTube

Contact Details

- Email address
- Phone number

---

10. Visitor Tracking (Lead Generation)

The system should track visitor activity.

Admin should be able to see:

- Total website visitors
- Registered students
- Students who viewed training pages
- Students who clicked enroll but did not complete payment

This data will help admin generate **leads for follow-up**.

Summary of Public Website Features

The public website will provide the following functionality:

- Introduction of XpertIntern
- Training course listing
- Course search and filtering
- Course enrollment option
- Certificate verification system
- Student login and signup
- Visitor tracking for lead generation
- Internship section showing **Coming Soon (Phase 2)**

Part 2 – Student Dashboard Requirements

1. Introduction

The Student Dashboard is the section that students access **after logging in or signing up** on the XpertIntern platform.

This dashboard will allow students to:

- View available training courses
- Enroll in training programs
- Access course materials
- Receive notifications
- Download invoices
- Verify their training progress

The student dashboard is designed to provide **a simple learning interface where students can manage their training activities**.

---

2. Student Login and Access

Students will reach the dashboard by clicking **Login / Signup** from the public website.

After entering their credentials successfully, they will be redirected to the **Student Dashboard**.

If a student signs up for the first time, they will also be redirected to the dashboard after registration.

---

3. Student Dashboard Overview

The dashboard should show an overview of the student's activity.

The main purpose of this page is to help students quickly see:

- Courses available
- Courses they have enrolled in
- Notifications related to their training

Dashboard Information Display

The dashboard may include:

- Welcome message with student name
- List of enrolled courses
- Training notifications
- Quick access to available trainings

---

4. Training Section

The training section allows students to explore and enroll in training courses uploaded by the admin.

Training Listing Page

Students should be able to see a list of all available courses.

Each course card should show:

- Course title
- Course image

- Short description
- Duration
- Enroll button
- View details button

Search and Filter Option

Students should be able to:

Search courses using keywords such as:

- Course name
- Skill name
- Technology name

Filters can be applied based on:

- Course category
- Duration
- Mode (if applicable)

---

5. Course Details Page

When students click **View Details**, they should be redirected to the course details page.

This page should display:

- Full course description

- Course modules
- Learning materials
- Course duration
- Enroll button

---

6. Course Enrollment Process

When a student clicks the **Enroll button**, the following process will happen:

1. The system will display an enrollment confirmation page.
2. The student will proceed with payment.
3. After successful payment, the student will be enrolled in the course.

Once enrollment is completed:

- The course will appear in the **Enrolled Courses section**.
- The student will receive a **confirmation email**.

---

7. Invoice Generation

When a student enrolls in a course and completes the payment:

The system must automatically generate an **invoice**.

The invoice should include:

- Student name

- Course name
- Payment amount
- Invoice number
- Date of payment

The invoice should be:

- Sent to the student's email
- Stored in the student dashboard

Students should be able to **download the invoice later** if needed.

---

8. Enrolled Courses Section

Students should be able to view all courses they have enrolled in.

This section should show:

- Course title
- Course status
- Access to learning materials

Students should be able to open the course and view the materials uploaded by the admin.

---

9. Course Content Access

After enrolling in a course, students should be able to access the learning materials.

These materials may include:

- PDF files
- Quiz questions
- Recorded content (if uploaded)

Students should be able to view or download these materials.

---

10. Google Meet Class Link Feature

The platform will not have built-in live streaming.

Instead, the admin will provide **Google Meet class links**.

The system should allow:

- Admin to upload the Google Meet link inside the course
- Students to view the class link in their enrolled course

Students should also receive a **notification when a new class link is added**.

---

11. Notification System

Students should receive notifications related to their enrolled courses.

Examples of notifications:

- New class link added
- New material uploaded
- Quiz added
- Course update

Notifications should appear inside the student dashboard.

---

12. Certificate Access

After completing a course, students may receive certificates.

Certificates may be:

- Sent by email
- Or verified using the certificate verification system on the public page.

Students should also be able to view their certificate details in their dashboard if required.

---

13. Student Activity Tracking

The system should track student actions such as:

- Courses viewed
- Courses enrolled
- Learning materials accessed

This information should be visible in the **admin dashboard** for analysis and lead tracking.

Summary of Student Dashboard Features

The student dashboard will allow students to:

- Browse training programs

- Search and filter courses
- Enroll in courses
- Access course materials
- View Google Meet class links
- Receive course notifications
- Download invoices
- Track enrolled courses

Part 3 – Admin Dashboard Requirements

---

1. Introduction

The Admin Dashboard is the **control panel of the XpertIntern platform**.

This section will be used by the platform administrator to manage the system.

Through the admin dashboard, the administrator will be able to:

- Upload training courses
- Manage course content
- Upload and manage certificates
- Upload certificates in bulk using Excel
- Monitor student activities
- Track website visitors and leads
- View student data

The admin dashboard should be **secure and accessible only to authorized users**.

---

2. Admin Login System

The admin must log in to access the dashboard.

Admin Login Fields

- Admin Email
- Password

After successful login, the admin will be redirected to the **Admin Dashboard Home Page**.

---

3. Admin Dashboard Overview

The dashboard home page should provide an overview of the system.

The admin should be able to see:

- Total number of students
- Total number of courses
- Total certificates uploaded
- Website visitors
- Recent student registrations

This overview helps the admin monitor the platform activity.

---

4. Training Course Management

One of the main features of the admin panel is the **training upload system**.

The admin should be able to create and manage training courses.

Add Training Course

The admin should be able to upload a training course by filling in the following details:

- Course Title
- Course Description
- Course Image / Thumbnail

- Course Duration
- Course Category (if applicable)

Course Modules

The admin should be able to define **course modules or curriculum**.

For each course, the admin can add multiple modules such as:

- Module Title
- Module Description

This will help structure the course content.

Course Materials

The admin should be able to upload learning materials for each course.

Supported content types include:

- PDF documents
- Quiz questions
- Study materials

These materials will be accessible to students who are enrolled in the course.

Google Meet Class Link

Since the platform does not support live streaming, the admin should be able to add a **Google Meet link**.

Features required:

- Admin can add the class link in the course
- Students can view the link inside their enrolled course
- Students receive a notification when the class link is added

---

5. Certificate Upload System

The platform will include a **certificate verification system**.

The admin should be able to upload certificate information into the system.

Certificate Data Upload

For each certificate, the admin should upload:

- Student Name
- Certificate Number
- Course Name
- Issue Date
- Certificate Image

This information will be stored in the system.

Certificate Verification Process

Students or other users can verify certificates by entering the **certificate number** on the public website.

After verification, the system should display:

- Student Name
- Course Name
- Certificate Number
- Issue Date
- Certificate Image

---

6. Bulk Certificate Upload (Excel Feature)

The system must support **bulk certificate upload using an Excel file**.

This feature allows the admin to upload many certificates at once.

Bulk Upload Process

Step 1
Admin downloads a **sample Excel template**.

Step 2
Admin fills the template with certificate data such as:

- Student Name
- Certificate Number
- Course Name
- Issue Date
- Certificate Image reference (if required)

Step 3
Admin uploads the Excel file into the system.

Step 4
The system reads the file and saves all certificate records in the database.

Bulk Certificate Email Feature

After uploading certificates, the admin should also be able to send certificate emails to students.

The email may contain:

- Student name
- Certificate details
- Certificate attachment (optional)

---

7. Student Data Management

The admin should be able to view student information.

The student data table may include:

- Student Name
- Email
- Phone Number
- Registration Date
- Enrolled Courses

Admin should also be able to export this data if needed.

---

8. Lead Generation and Visitor Tracking

The system should track user activities on the website.

Admin should be able to see:

- Number of website visitors
- Students who registered
- Students who viewed courses
- Students who clicked enroll but did not complete payment

This information will help generate leads.

---

9. Invoice and Payment Monitoring

When students enroll in courses and complete payment, the system should generate an **invoice automatically**.

Admin should be able to view:

- Invoice number
- Student name
- Course name
- Payment amount
- Payment date

This information will help track revenue and transactions.

---

10. Data Export Feature

The admin should be able to export important data in **Excel format**.

Examples of exportable data:

- Student list
- Course enrollments
- Certificate records
- Visitor leads

This feature will help with reporting and analysis.

Summary of Admin Dashboard Features

The Admin Dashboard will allow the administrator to:

- Upload and manage training courses
- Add course modules and materials
- Add Google Meet class links
- Upload certificate records
- Upload certificates in bulk using Excel
- Enable certificate verification
- Monitor student registrations
- Track visitor leads
- Manage invoices and payments
- Export data for reporting

Conclusion

The XpertIntern platform will include three main components:

Public Website
Student Dashboard
Admin Dashboard

Together, these sections will allow the platform to:

- Provide training programs
- Manage student enrollments
- Verify certificates digitally
- Track student activities and leads
