

XpertIntern Admin Panel

Developer Requirements & Correction Document

Prepared by	EzyIntern / XpertIntern — Product Owner
For	XpertIntern Development Team
Date	02 August 2026
Product	XpertIntern Admin Panel (xpertintern.com/admin)
Document type	Correction & Feature Requirement Document (CFRD)

Purpose of this Document

This document lists all the changes and new features that must be added to the XpertIntern Admin Panel. Each point tells the developer clearly: what is wrong right now, what should be built, where in the panel to make the change, and how to test that the fix is complete. Please read every section carefully and follow the checklist at the end of each section.

How to read each section

- **What is wrong now** — the current problem in the live admin panel.
- **What developer must do** — the exact changes/features to build.
- **Where to make the change** — the page or module in the admin panel.
- **Acceptance Checklist** — the tick-list QA will use to accept the work.

Important overall rule

All backend changes must also update the database schema, all list APIs must support pagination + search + filter, and every destructive action (delete, suspend, refund) must ask for confirmation and must be logged in the Activity Log with the admin user, IP address and timestamp.

Table of Contents

Section 1	Training Management – Delete, Activate, Deactivate
Section 2	Add Training – Kit and Coupons at Creation Stage
Section 3	Help & FAQ – Show on Public Website
Section 4	Students Section – Full Overhaul (search, filter, export, actions, tabs)
Section 5	Payments Section – Show Student Details
Section 6	Payments Dashboard – Revenue, Success, Failed, Pending, Refunds
Section 7	Payment View – Download & Regenerate Invoice + Auto Email
Section 8	Invoice on Enrollment – Send Correct PDF Format (fix logo)
Section 9	Payments Section – Search and Filter
Section 10	Bulk Invoice Download of Successful Payments
Annex A	Suggested Database Fields
Annex B	Suggested API Endpoints
Annex C	Final Acceptance Summary

Section 1 — Training Management: Delete, Activate, Deactivate

Where to make the change

Admin Panel > **Training** > Training Management list page.

What is wrong and what to build

What is wrong now	What developer must do
In the Training Management list, each row only has an Edit (pencil) icon and a Deactivate (crossed circle) icon. There is no Delete option , and the status toggle does not clearly show both Activate and Deactivate states.	Add three action icons in every row of the Training list: (1) Edit , (2) Activate / Deactivate toggle (icon and colour must change based on current status), and (3) Delete . Delete must ask for confirmation ('Type training title to confirm') and should be a soft delete (mark as deleted, keep record for reports and refunds).

Detailed behaviour

- **Activate**: sets status = **Active**. Training becomes visible to students and open for enrollment.
- **Deactivate**: sets status = **Inactive**. Training is hidden from student site and new enrollments are blocked, but existing enrolled students keep access.
- **Delete**: soft delete only. Training is removed from the list by default. Add a filter 'Show deleted' so super admin can restore.
- Only Super Admin can perform Delete. Regular admins can Activate / Deactivate only.
- All three actions must be recorded in the **Activity Log** with admin name, IP and time.

Acceptance Checklist (must be true after fix)
■ Every training row shows Edit, Activate/Deactivate, and Delete icons with tooltips.
■ Clicking Delete shows a confirmation modal and never removes the row without confirmation.
■ Deactivated trainings do not appear on the public site or student dashboard for new enrollment.
■ Soft-deleted trainings are hidden by default but can be restored by Super Admin.
■ Every action is written to the Activity Log.

Section 2 — Add Training: Kit & Coupons at Creation Stage

Where to make the change

Admin Panel > **Training** > + **Add New Training** flow.

What is wrong and what to build

What is wrong now	What developer must do
At the time of adding a new training, there is no option to add a Kit (welcome kit / study material) or a Coupon (discount code). These options are only shown later, inside the Edit screen after the training has been created and listed. Also, they are shown together, which is confusing.	Add Kit and Coupon as two separate sections inside the Add New Training form itself. Both must also remain available in the Edit screen. Do not mix them into one section — Kit is a physical/digital product bundle; Coupon is a discount rule. They must have their own forms.

Kit section – fields to add

- Kit Name (text)
- Kit Type (dropdown: Physical / Digital / Mixed)
- Kit Items (repeatable rows: item name + quantity)
- Kit Cost to Company (number, admin-only)
- Kit Image (upload)
- Include Kit with this Training? (Yes / No toggle)
- Shipping applicable? (Yes / No). If Yes, then shipping charge field appears.

Coupon section – fields to add

- Coupon Code (text, unique, auto-uppercase)
- Discount Type (Flat ☐ / Percentage ☐)
- Discount Value (number)
- Minimum Order Value (number)
- Maximum Discount Cap (number, only if Percentage)
- Valid From – Valid Till (date range)
- Usage Limit – total and per student
- Applicable To (this training only / selected trainings / all)
- Active toggle

Placement in the form

The Add Training form should have clear step tabs or sections in this order: **1. Basic Info** → **2. Curriculum** → **3. Pricing** → **4. Kit** → **5. Coupon** → **6. Publish**. Kit and Coupon must be independent steps, not merged.

Acceptance Checklist (must be true after fix)

- Kit can be added while creating a new training, not only in Edit.

-
- | |
|---|
| ■ Coupon can be added while creating a new training, not only in Edit. |
| ■ Kit and Coupon are two separate sections/steps with their own Save buttons. |
| ■ Coupon code is validated for uniqueness before save. |
| ■ Kit and Coupon are also editable later from the Edit Training screen. |

Section 3 — Help & FAQ Must Show on Public Website

Where to make the change

Admin Panel > **Help & FAQ** and Public site > **FAQ / Help** page.

What is wrong and what to build

What is wrong now	What developer must do
When admin adds a new FAQ question and answer from the admin panel, it appears only on the student dashboard (logged-in area). It does not appear on the public website (the FAQ / Help page that visitors see before login).	The FAQ list must be a single source of truth . Whatever the admin adds must be visible on both the public site FAQ page and the student dashboard FAQ. Add a Visibility toggle in each FAQ entry: Public , Students only , or Both (default Both).

Fields to add per FAQ entry

- Question (text)
- Answer (rich text)
- Category (dropdown – General, Payment, Certificate, Internship, Training, Account)
- Visibility (Public / Students only / Both) – default **Both**
- Display Order (number) – to control sorting
- Active toggle

Public page behaviour

- Public FAQ page must fetch all entries where Visibility is **Public** or **Both** and Active = true.
- Group by Category with expand / collapse (accordion).
- Add a search bar to search inside questions and answers.
- Cache API response for 5 minutes to reduce load.

Acceptance Checklist (must be true after fix)
■ Admin adds an FAQ set to 'Both' → visible on public site and student dashboard immediately (or within cache TTL).
■ FAQ set to 'Public' → visible only on public site.
■ FAQ set to 'Students only' → visible only on student dashboard.
■ Search and category filter work on the public FAQ page.

Section 4 — Students Section: Full Overhaul

Where to make the change

Admin Panel > **Students** (list page) and Student Details page.

Current problem (summary)

The Students section currently shows a simple list of registered students. There is no search, no filter, no export. When an admin clicks the Action button of a student, the Enrolled Training tab shows only a code like 69f0afc35ee49fefeb173cde — 2026-07-29 — which is not usable. Also, the student profile page does not offer edit, message, password reset, suspend, delete, or a proper set of tabs (Applied Internships, Documents, Payments, Support Tickets, Activity Log).

4a. Search and Filter on Students List

What is wrong now	What developer must do
No way to search or filter students. Admin has to scroll the whole list.	Add a search bar (by name, email, phone, student ID) and multiple filters.

Filters to add (all should support multi-select and combine as AND):

- University
- College
- Course (B.Tech, Diploma, BCA, etc.)
- Branch / Subject (CSE, ECE, ME, etc.)
- Semester
- Enrollment Status (Enrolled / Not enrolled)
- Account Status (Active / Suspended / Deleted)
- Registration date range

4b. Data Export

What is wrong now	What developer must do
No way to export the students list.	Add an Export button. It must export the currently filtered result (not the whole DB), with format options CSV and Excel (.xlsx) . Column selection dialog should let admin choose which columns to include.

4c. Enrolled Training Tab — Show Titles, Not Codes

What is wrong now	What developer must do
-------------------	------------------------

Enrolled Trainings tab shows only the training code and enrollment date, e.g. 69f0afc35ee49fefeb173cde – 2026-07-29.	Show a proper card / row for every enrolled training with the following visible fields: Training Title , University, Category, Mode (Online/Offline), Duration, Fee Paid, Enrollment Date, Progress %, Certificate Status, and a 'View' button that opens the training. The internal ID should be shown as small grey text only.
---	--

4d. Edit Student Data (Override)

What is wrong now	What developer must do
Admin cannot edit a student's details.	Add an Edit (Override) button on the Student Details page. Allow editing of name, email, phone, university, college, course, branch, semester, DOB, address. Every field change must be logged in Activity Log with old value → new value.

4e. Send Message via Email

What is wrong now	What developer must do
No way to send a message to a student from the panel.	Add a Send Message button. Open a modal with fields: Subject, Body (rich text), optional Attachment. On send, use the transactional email service and log the message in Support Tickets tab as an outbound message.

4f. Password Reset

What is wrong now	What developer must do
No password reset for admin.	Add a Reset Password button that sends a secure reset link to the student's registered email. Link must expire in 30 minutes and be single-use. Do not show or set a password inside the panel.

4g. Suspend and Delete

What is wrong now	What developer must do
-------------------	------------------------

No suspend or delete option.	Add Suspend (temporarily block login, keep data) and Delete (SA Only) (soft delete for Super Admin, requires typing student email to confirm). Suspended students cannot log in and see a message: 'Your account is suspended. Contact support.'
------------------------------	--

4h. Full Set of Tabs on Student Details

The Student Details page must have the following tabs, in this order. All tabs must load real data.

Tab	What it must show
Profile	All profile fields, editable via Edit (Override).
Enrolled Trainings	Training title, university, mode, duration, fee paid, progress, certificate.
Applied Internships	Company, role, applied date, current status (Applied / Shortlisted / Selected / Rejected).
Documents (rename 'Certificates' to 'Documents')	Offer letters + Completion letters + any uploaded ID. Each with download button.
Payments	All transactions of this student: TXN ID, training, amount, status, date, invoice link.
Support Tickets	Tickets raised by / for this student, status, last update, inbound/outbound messages.
Activity Log	Login, profile edits, admin actions, payments, refunds, suspend/delete — all with time

Rename note The tab currently called Certificates must be renamed to Documents everywhere (navigation, page title, breadcrumbs, and the left-menu 'Certificates' item in the admin panel — the whole module should be renamed to 'Documents'). Certificates are one type of Document; the module will also hold offer letters, completion letters, and any uploaded IDs.
Acceptance Checklist (must be true after fix) ■ Search box works on name, email, phone, student ID. ■ All filters (university, college, course, branch, semester, status) work together. ■ Export button downloads the currently filtered list as CSV and Excel. ■ Enrolled Trainings tab shows training titles, not just codes. ■ Edit (Override), Reset Password, Send Message, Verify Email, Suspend, Delete (SA Only) buttons all work. ■ All 7 tabs (Profile, Enrolled Trainings, Applied Internships, Documents, Payments, Support Tickets, Activity Log) load real data. ■ 'Certificates' module and tab is renamed to 'Documents' across the panel.

Section 5 — Payments Section: Show Student Details

Where to make the change

Admin Panel > **Payments** (Payments & Invoices list).

What is wrong now	What developer must do
The Payments list shows only a long student ID (like 69bc355391f645914f355a68) in the Student column. Admin cannot tell whose payment it is without opening the record.	Replace the raw student ID with the student's Name as the primary text and Email as small grey text below. Make the whole cell a clickable link that opens the Student Details page. Keep the raw ID visible only on hover (tooltip) or inside the payment detail view.

Additional columns to display on the Payments list

- Student Name (with email below)
- Training / Program title (not code)
- Coupon used (if any)
- Payment Mode (UPI / Card / Netbanking / Offline)
- Amount
- Status (Success / Created / Failed / Pending / Refunded)
- Date and time
- Actions: View, Download Invoice, Refund (if success)

Acceptance Checklist (must be true after fix)
■ Every payment row shows the student's name and email, not just the ID.
■ Clicking the student cell opens the Student Details page in a new tab.
■ Every payment row shows the training title (not code).

Section 6 — Payments Dashboard: Revenue, Success, Failed, Pending, Refunds

Where to make the change

Admin Panel > **Payments** — top summary cards.

What is wrong now	What developer must do
The five summary cards at the top (Total Revenue, Successful Payments, Failed Payments, Pending Payments, Refunds Issued) all show a dash '—'. No real numbers are calculated.	Compute and display real live numbers for each card, based on the currently applied filter (date range, university, training). Numbers must recalculate when the filter changes.

Card definitions

Card	Value to show	Rule
Total Revenue	■ sum	Sum of amount where status = success (excluding refunds).
Successful Payments	count	Number of payments where status = success.
Failed Payments	count	Number of payments where status = failed.
Pending Payments	count	Payments where status = created / pending for more than 15 minutes
Refunds Issued	■ sum + count	Sum of refunded amount and how many refunds.

- Below each card, show a small comparison to previous period (e.g. '+12% vs last 30 days').
- Clicking a card should apply that status as a filter on the list below.
- Numbers must respect date range, university and training filters selected above.
- Cache computation for 60 seconds to keep the dashboard fast.

Acceptance Checklist (must be true after fix)
■ All five cards display real numbers (no dash) at page load.
■ Numbers change when date range or other filters are applied.
■ Clicking a card filters the payments list to that status.

Section 7 — Payment View: Download & Regenerate Invoice + Auto Email

Where to make the change

Admin Panel > Payments > **View** (Payment Details page).

What is wrong now	What developer must do
The Payment Details page already shows two buttons: Download Invoice and Re-generate Invoice . But the buttons need clear behaviour, and the regenerated invoice is not automatically sent to the student.	Confirm both buttons work as below, and add automatic emailing after regeneration.

Download Invoice button

- Downloads the latest saved invoice PDF for that transaction.
- If invoice file does not exist yet, generate it on the fly and then download.
- File name: Invoice_<TXN_ID>_<YYYY-MM-DD>.pdf

Re-generate Invoice button

- Rebuilds the invoice PDF using the **latest company details and template** (in case company address, GST, or logo has changed).
- Increments an internal version number so we can trace which invoice version the student received.
- After successful regeneration, **automatically emails** the new PDF to the student's registered email, with a copy (BCC) to **accounts@xpertintern.com**.
- Email subject: Updated Invoice for your XpertIntern payment – <TXN_ID>
- Email body: short message telling the student the invoice was updated and attached.
- Show a success toast: 'Invoice regenerated and emailed to student'.
- Every regeneration is logged in the Activity Log with admin name, reason (optional field), time.

Manual Verify and Process Refund

Also add two more buttons on the same page: **Manual Verify** (for offline UPI / bank payments — opens a small form to enter UTR / reference number) and **Process Refund** (required field: reason; optional fields: amount, gateway reference). Both must update the payment status and log the action.

Acceptance Checklist (must be true after fix)
■ Download Invoice downloads a valid PDF.
■ Re-generate Invoice creates a new PDF and emails it to the student automatically.
■ A copy of every regenerated invoice goes to accounts@xpertintern.com.
■ Manual Verify and Process Refund forms work and log actions.

Section 8 — Invoice on Enrollment: Send Correct PDF (Fix Logo Issue)

Where to make the change

Invoice generation service used by (a) successful enrollment webhook, (b) Payment Details > Download Invoice, and (c) Payment Details > Re-generate Invoice.

What is wrong now	What developer must do
When a student enrolls successfully, an email goes out with two files: a PDF and an HTML file. The PDF is in the wrong format (not the invoice template that was approved earlier). The HTML file is in the correct format but the XpertIntern logo is broken/not showing . Result: no clean, correct invoice reaches the student.	Stop sending the HTML file. Send only the PDF , and build the PDF using the approved invoice format that was shared earlier (the same layout that currently appears in the HTML version). Make sure the XpertIntern logo is embedded correctly in the PDF.

What 'approved invoice format' means (must-have blocks)

- Top-left: **XpertIntern logo** (embed as an actual image inside the PDF — do not use a remote URL that can break). Use a high-resolution PNG or SVG converted to a PDF-safe image.
- Top-right: **Invoice Number**, **Invoice Date**, and **Transaction ID**.
- Seller block: Xpert Ventures Private Limited (brand: XpertIntern), full registered address, GSTIN, PAN, email, phone.
- Buyer block: Student name, email, phone, university/college.
- Table: Item description (training title), duration, unit price, quantity, discount (coupon), taxable value, GST %, GST amount, line total.
- Totals: Sub-total, discount, tax, grand total (in figures and words).
- Payment details: Mode, Gateway, TXN ID, Paid on date/time, Status.
- Footer: Terms, refund policy link, signature block (Authorised Signatory), and 'This is a computer-generated invoice' line.

Technical rules for the PDF

- Generate with a proper PDF library (WeasyPrint / wkhtmltopdf / ReportLab) so fonts and layout are consistent.
- Embed all fonts and images inside the PDF file.
- File size target < 300 KB.
- File naming: Invoice_<TXN_ID>_<YYYY-MM-DD>.pdf.
- Save the PDF to storage and keep a permanent URL. Never generate a new URL each time for the same invoice unless it was regenerated.

Email that goes out on successful enrollment

- Attach: Invoice PDF only. Do **not** attach the HTML file any more.
- Subject: Payment received – Welcome to <Training Title> | XpertIntern

- Body: Short thank-you, next steps, and a link to the training on the student dashboard.
- BCC: accounts@xpertintern.com

Reference to the approved format

Please use the **invoice format that was shared earlier by the product owner** as the base template. If the developer does not have that file at hand, request it before starting so that the PDF matches exactly. Do not design a new format.

Acceptance Checklist (must be true after fix)

- Enrollment emails carry only the PDF invoice — the HTML file is removed.
- The PDF matches the approved invoice format 1-to-1.
- XpertIntern logo appears correctly in the PDF (not broken).
- Same PDF is used for Download Invoice and Re-generate Invoice.

Section 9 — Payments Section: Search and Filter

Where to make the change

Admin Panel > **Payments** — top toolbar.

What is wrong now	What developer must do
Only a status dropdown and a text search box exist. No date filter, no training filter, no amount filter, no student filter.	Add a full filter bar so admin/finance can quickly find any payment.

Filters to add

- **Search:** by Student Name, Email, Phone, TXN ID, Gateway Ref (already partially exists — expand fields).
- **Status:** All / Success / Created / Pending / Failed / Refunded.
- **Payment Mode:** UPI / Card / Netbanking / Wallet / Offline.
- **Date Range:** with quick presets Today, Yesterday, Last 7 days, Last 30 days, This Month, Last Month, Custom.
- **Training / Program:** multi-select dropdown.
- **University:** multi-select dropdown.
- **Amount:** Min – Max range.
- **Coupon used:** Yes / No / Specific coupon code.

Behaviour rules

- Filters must apply to the list **and** to the summary cards above (Total Revenue, etc.).
- Show number of matching records next to the list heading.
- Add a 'Clear all filters' button.
- Save the last-used filter per admin user in browser localStorage.

Acceptance Checklist (must be true after fix)
■ All listed filters are working and can be combined.
■ Summary cards recalculate as filters change.
■ Clearing filters resets the list to full data.

Section 10 — Bulk Invoice Download of Successful Payments

Where to make the change

Admin Panel > **Payments** — add bulk action toolbar.

What is wrong now	What developer must do
No way to download many invoices together. Admin has to open each payment one by one to download.	Add a bulk-download flow so all invoices of successful payments in the current filter (or selected rows) can be downloaded together as a single ZIP file.

Two ways to trigger bulk download

- **By filter:** Admin applies filters (e.g. status = Success, date = Last 30 days, university = BEU). Clicks **Bulk Download Invoices**. All matching invoices are zipped.
- **By selection:** Add a checkbox column in the list. Admin ticks specific rows and clicks **Download Selected Invoices**. Only ticked rows are zipped.

Rules and safeguards

- Only invoices for payments with status = **Success** can be included. Skip failed/pending automatically and show a small note if any were skipped.
- If number of invoices > 500, run the job as a **background task**. Send an email to the admin when the ZIP is ready, with a secure, expiring download link (valid for 24 hours).
- ZIP structure: Invoices_<YYYY-MM-DD>.zip → <TXN_ID>.pdf for each invoice. Include a manifest.csv at the root listing TXN ID, Student Name, Training, Amount, Date, Invoice File name.
- Log every bulk download (who, how many, filter used) in Activity Log.
- Rate limit: same admin cannot start more than 3 bulk jobs at once.

Acceptance Checklist (must be true after fix)
■ Admin can download 10, 100 or 1000 invoices as a single ZIP.
■ Only successful payment invoices are included; skipped rows are reported.
■ Large jobs run in background and finished ZIP is emailed with a 24-hour link.
■ manifest.csv is present inside the ZIP.
■ Bulk downloads are logged in Activity Log.

Annex A — Suggested Database Fields (for developer reference)

trainings table – new/changed fields

- status ENUM('active','inactive','deleted') DEFAULT 'active'
- deleted_at TIMESTAMP NULL
- deleted_by INT NULL

kits table (new)

- id, training_id (FK), name, type, items (JSON), cost, image_url, shipping_charge, is_active

coupons table (new)

- id, code (UNIQUE), discount_type, discount_value, min_order, max_discount, valid_from, valid_till, usage_limit_total, usage_limit_per_user, applicable_scope (this_training / selected / all), applicable_ids (JSON), is_active

coupon_usages table (new)

- id, coupon_id, student_id, payment_id, used_at

faqs table – new/changed fields

- visibility ENUM('public','students','both') DEFAULT 'both'
- category, display_order, is_active

students table – new/changed fields

- status ENUM('active','suspended','deleted') DEFAULT 'active'
- suspended_at, suspended_by, deleted_at, deleted_by

payments table – new/changed fields

- invoice_url, invoice_version INT DEFAULT 1
- coupon_id NULL (FK to coupons), coupon_code_snapshot VARCHAR
- payment_mode ENUM
- refund_amount, refund_reason, refund_gateway_ref, refunded_at, refunded_by

activity_logs table (new / expand)

- id, actor_type (admin/student/system), actor_id, action, entity_type, entity_id, old_value (JSON), new_value (JSON), ip, user_agent, created_at

Annex B — Suggested API Endpoints

Endpoint	Purpose
PATCH /admin/trainings/{id}/status	Activate / Deactivate a training.
DELETE /admin/trainings/{id}	Soft delete a training (Super Admin only).
POST /admin/trainings/{id}/kit	Create/update kit for a training.
POST /admin/trainings/{id}/coupons	Add coupon to a training.
GET /public/faqs	Public FAQs (visibility = public or both).
GET /student/faqs	Student FAQs (visibility = students or both).
GET /admin/students?search=&filters=	Filtered student list with pagination.
GET /admin/students/export?format=csv	Export filtered list.
PATCH /admin/students/{id}	Edit override student data.
POST /admin/students/{id}/reset-password	Trigger reset link email.
POST /admin/students/{id}/message	Send email message and log it.
PATCH /admin/students/{id}/suspend	Suspend student.
DELETE /admin/students/{id}	Soft delete student (SA only).
GET /admin/students/{id}/enrolled-trainings	Full training info, not just codes.
GET /admin/students/{id}/applied-internships	Internship applications.
GET /admin/students/{id}/documents	Certificates and other docs (renamed).
GET /admin/students/{id}/payments	All payments of a student.
GET /admin/students/{id}/tickets	Support tickets and messages.
GET /admin/students/{id}/activity-log	Full activity log.
GET /admin/payments?filters=	Payments list with all filters.
GET /admin/payments/summary?filters=	Cards data (revenue, success, failed, pending, refunds).
POST /admin/payments/{id}/invoice/regenerate	Regenerate PDF + email student + BCC accounts.
GET /admin/payments/{id}/invoice/download	Download the current invoice PDF.
POST /admin/payments/bulk-invoice-download	Trigger bulk ZIP job by filter or selected IDs.
POST /admin/payments/{id}/refund	Process refund with reason.
POST /admin/payments/{id}/manual-verify	Manual verify offline UPI/bank payment.

Annex C — Final Acceptance Summary

This is a quick tick-list of every change requested. QA must tick every box before the release is accepted.

Acceptance Checklist (must be true after fix)
■ Training row shows Edit, Activate/Deactivate, and Delete (soft) icons.
■ Add Training form has separate Kit and Coupon steps (not only in Edit).
■ Admin FAQ shows on both public site and student dashboard, controlled by Visibility field.
■ Students list has search + full filters (university, college, course, branch, semester, status, date).
■ Students list has Export to CSV and Excel.
■ Enrolled Trainings tab shows titles, not codes.
■ Student Details has Edit Override, Reset Password, Send Message, Verify Email, Suspend, Delete (SA).
■ Student Details has 7 tabs: Profile, Enrolled Trainings, Applied Internships, Documents, Payments, Support Tickets, Activity Log.
■ Certificates module/tab renamed to Documents everywhere.
■ Payments list shows student name + email, and training title.
■ Payments dashboard cards show real live numbers.
■ Payment View has Download Invoice and Re-generate Invoice (auto emails student + BCC accounts).
■ Manual Verify and Process Refund forms work.
■ Enrollment email sends only the correct-format PDF invoice with a proper XpertIntern logo (no more HTML file).
■ Payments section has full search + filters (status, mode, date range, training, university, amount, coupon).
■ Bulk invoice download works by filter and by row selection, and by background job for large sets.
■ Every admin action is logged in Activity Log.
